Texas Competitiveness: Creating a State Economic Strategy

March 28, 2012

The Economic Challenge for Governors in 2011

What is Competitiveness?

- Competitiveness is the productivity with which a state utilizes its human, capital, and natural endowments to create value
- Productivity determines wages, jobs, and the standard of living
- It is not what fields a state competes in that determines its prosperity, but how productively it competes

Where Does Productivity Come From?

Businesses and government play different but interrelated roles in creating a productive economy

- Only businesses can create jobs and wealth
- States compete to offer the most productive environment for business

Agenda

1. How is your state doing? State Performance Scorecard

2. Why? Explaining your state's performance, strengths, and weaknesses

3. Where to go from here? Action Steps

Government

Quality of the Overall Business Environment

- Many things matter for competitiveness
- Economic development is the process of improving the business environment to enable companies to compete in increasingly sophisticated ways

Improving the Business Environment Common Action Items

- Simplify and speed up regulation and permitting
- 2. Reduce unnecessary costs of doing business
- Establish training programs that are aligned with the needs of the state's businesses
- Focus infrastructure investments on the most leveraged areas for productivity and economic growth
- 5. Design all policies to support emerging growth companies
- Protect and enhance the state's higher education and research institutions
- Relentlessly improve the public education system, the essential foundation for productivity in the long run

Why? What Drives State Productivity?

1. Quality of the Overall Business Environment

2. Cluster Development

3. Policy
Coordination
among Multiple
Levels of
Geography/
Government

What is a Cluster?

A geographically concentrated group of interconnected companies and associated institutions in a particular field

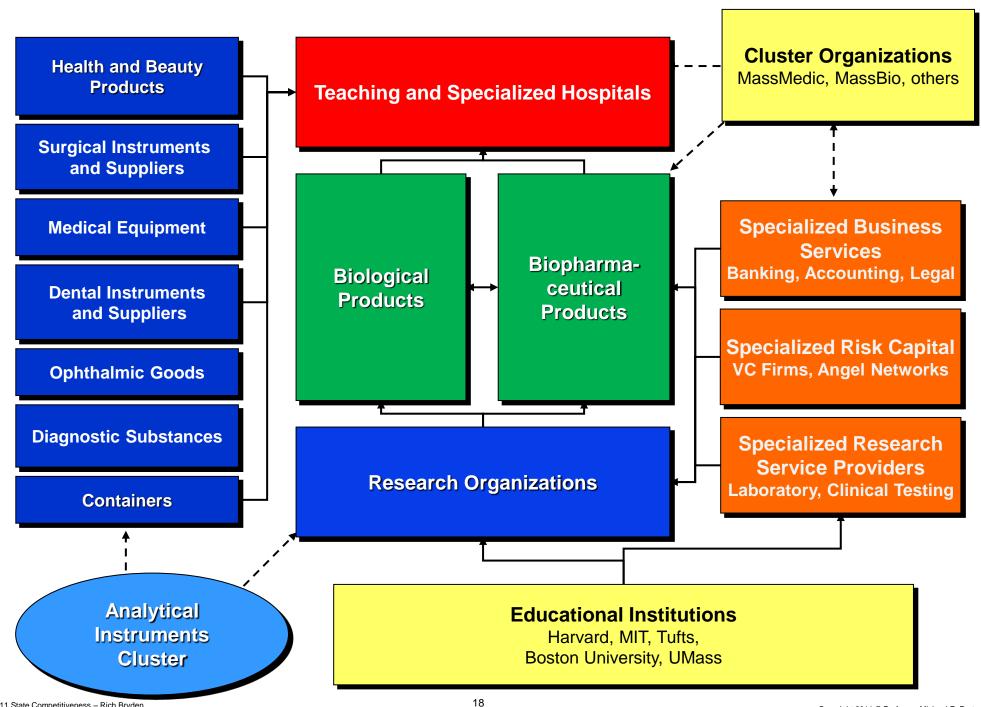

Traded Clusters

- Compete to serve national and international markets
- Can locate anywhere
- 30% of employment

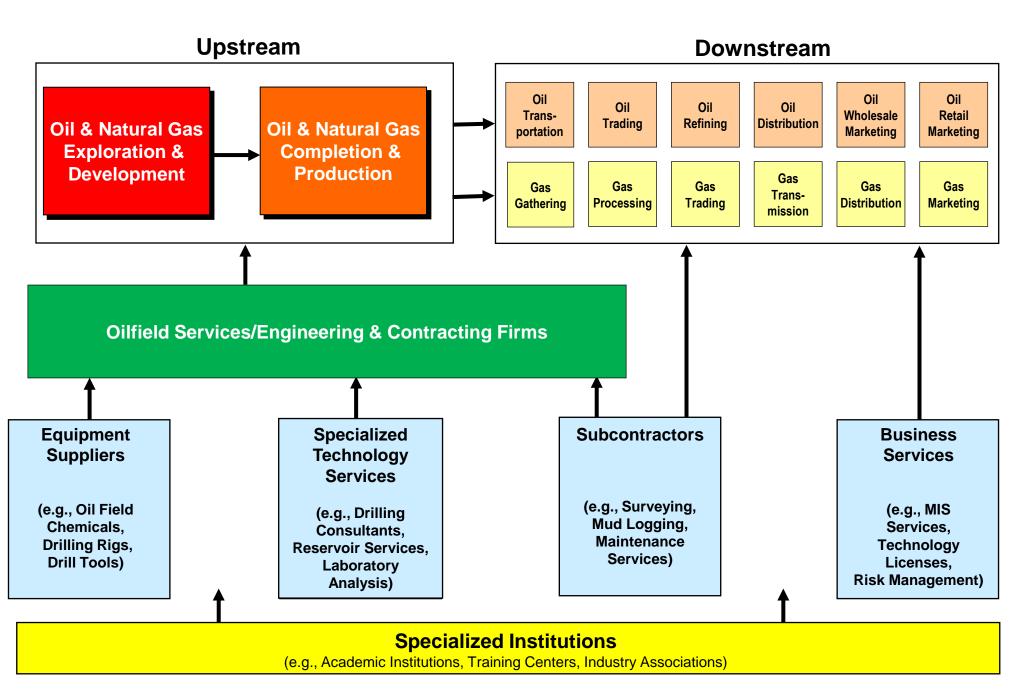

Local Clusters

- Serve almost exclusively the local market
- Not directly exposed to cross-regional competition
- 70% of employment

Example: Massachusetts Life Sciences Cluster

Example: Houston Oil and Gas Cluster

Strong Clusters Drive Regional Performace

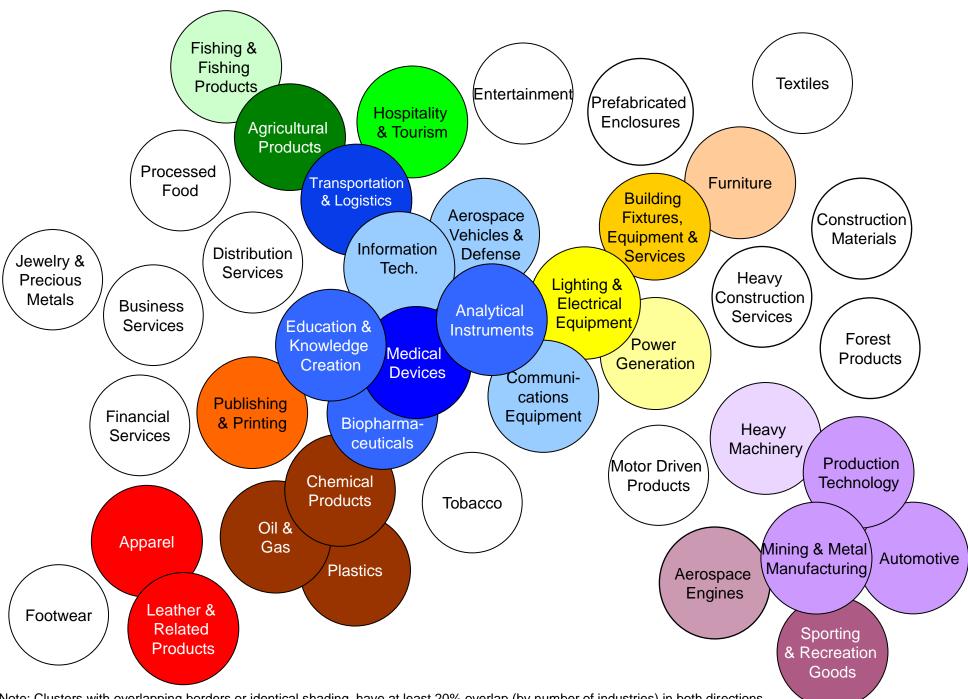

- Specialization in strong clusters
- Breadth of industries within each cluster
- Strength in related clusters
- Presence of a region's clusters in neighboring regions

- Job growth
- Higher wages
- Higher patenting rates
- Greater new business formation, growth and survival

On average, cluster strength is much more important (78.1%) than cluster mix (21.9%) in driving regional performance in the U.S.

Clusters and Economic Diversification

Note: Clusters with overlapping borders or identical shading have at least 20% overlap (by number of industries) in both directions.

Cluster Development Common Action Items

- Build on the state's existing and emerging clusters rather than chase "hot" fields
- Pursue economic diversification within clusters and across related clusters
- 3. Create a private sector-led **cluster upgrading program** with matching support for participating private sector cluster organizations
 - Government should listen and remove obstacles to cluster improvement
- 4. Align other state economic policies and programs with clusters

Aligning Economic Policy and Clusters

 Clusters provide a framework for organizing the implementation of many public policies and public investments to achieve greater effectiveness

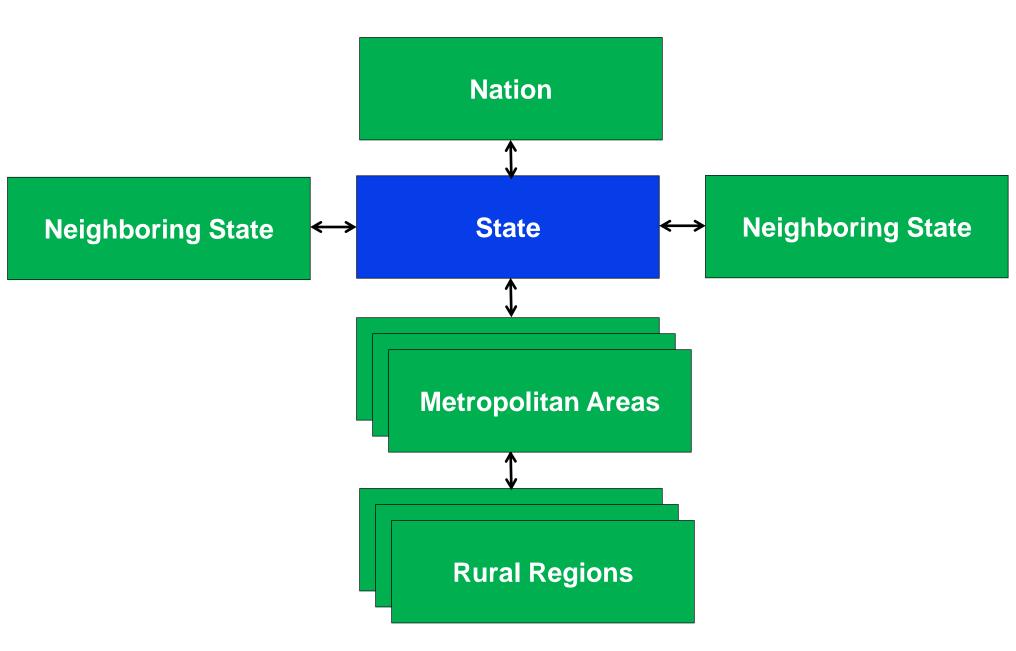

Why? What Drives State Productivity?

1. Quality of the Overall Business Environment

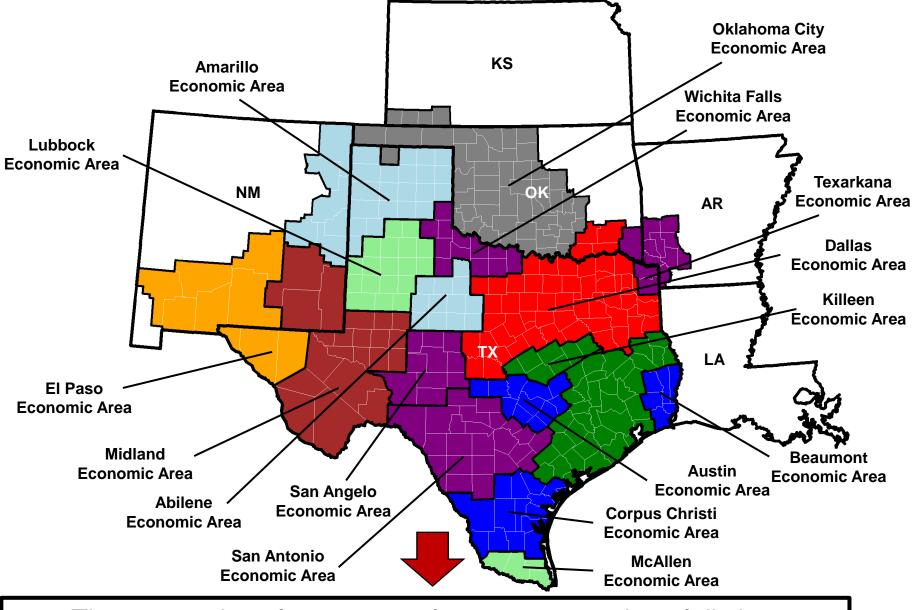

2. Cluster Development

3. Policy
Coordination
among Multiple
Levels of
Geography/
Government

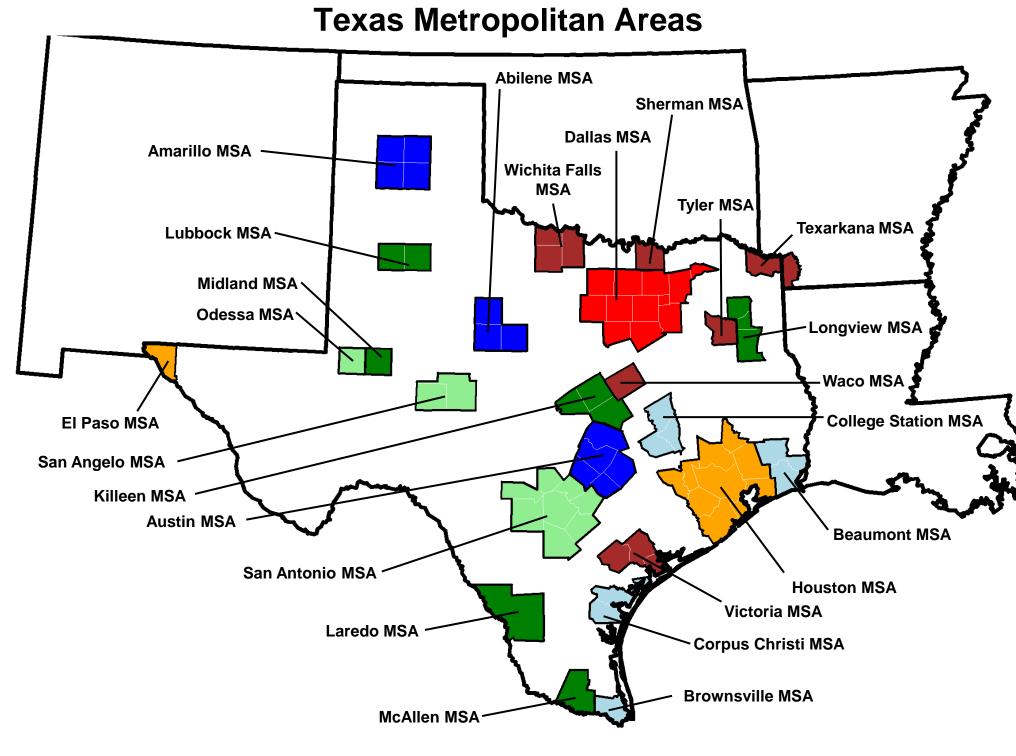

Geographic and Governmental Influences on Productivity

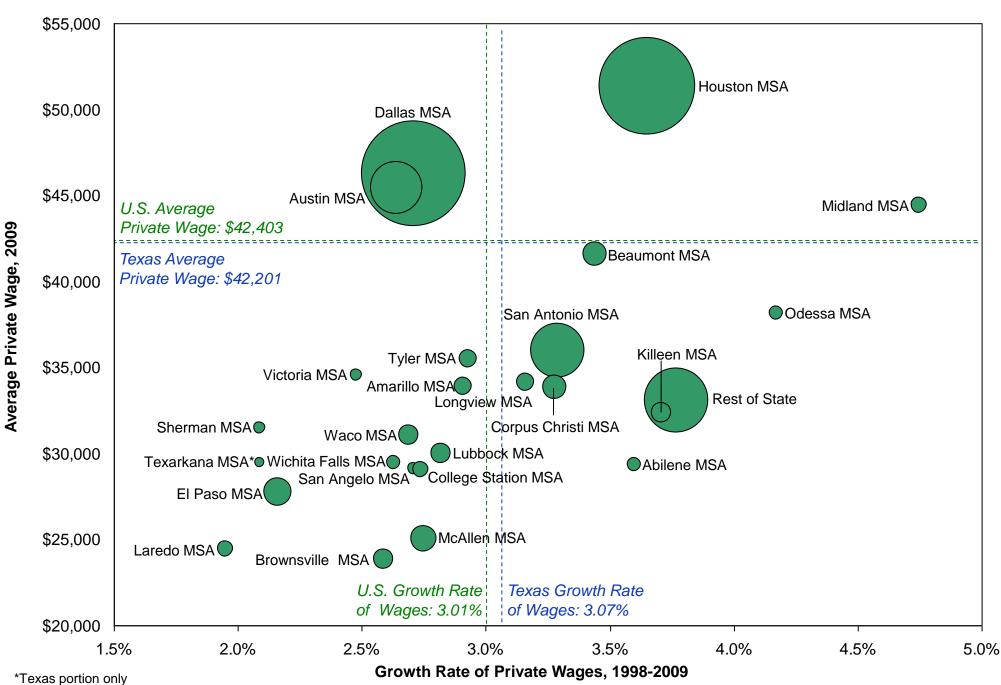

Defining the Appropriate Economic Regions

The economies of states are often an aggregation of distinct economic areas with differing circumstances

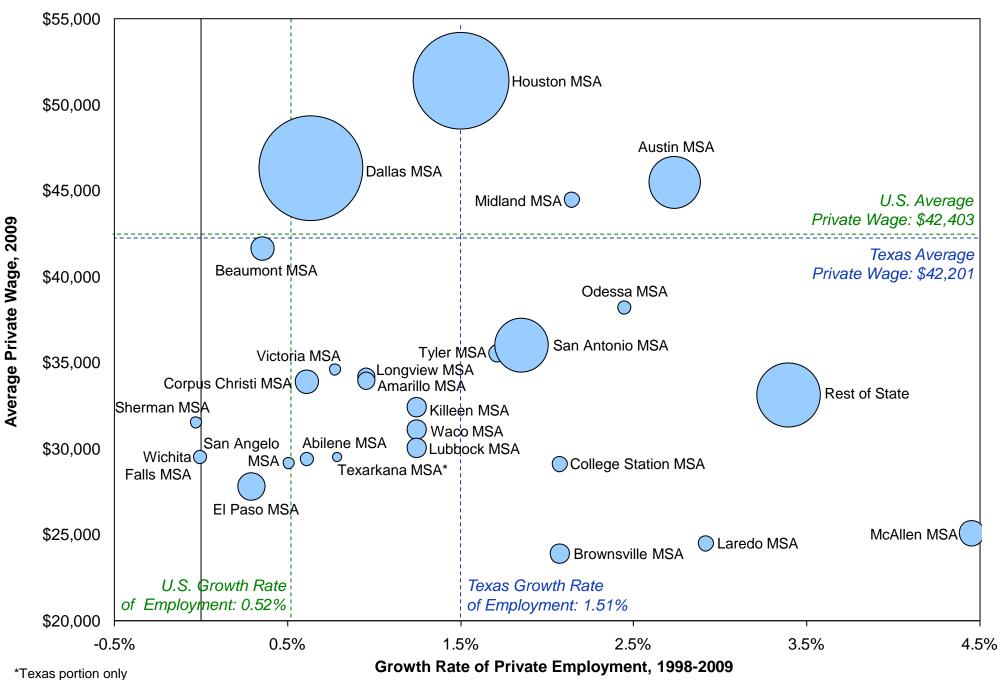

Wage Performance in Texas Metropolitan Areas

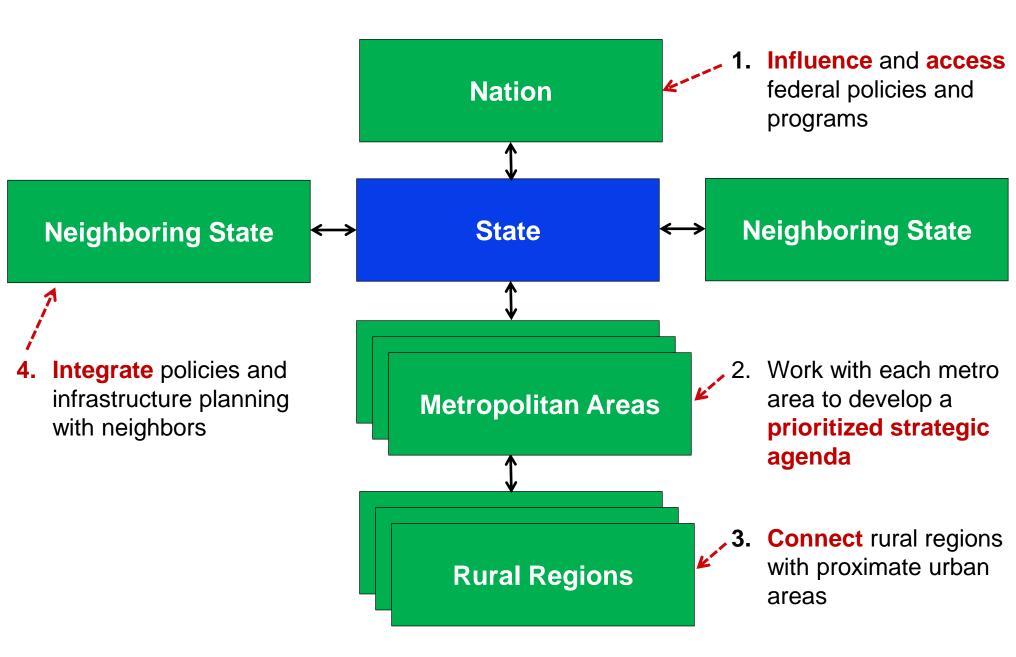

Source: Census CBP, authors' analysis. Note: "Bubble" size in chart is proportional to employment in 2009. 36

Employment Performance in Texas Metropolitan Areas

3. Where to go from here? Action Steps

Agenda

1. How is your state doing? State

State Performance Scorecard

2. Why?

Explaining your state's performance, strengths, and weaknesses

3. Where to go from here?

Action Steps

Biggest Action Item of All

Create an Economic Strategy

- What is the distinctive competitive position of the state or region given its location, legacy, existing strengths, and potential strengths?
 - What unique value as a business location?
 - For what types of activities and clusters?

Define the Value Proposition

Develop Unique Strengths

- What elements of the business environment can be unique strengths relative to peers/neighbors?
- What existing and emerging clusters represent local strengths?

Achieve and Maintain Parity with Peers

 What weaknesses must be addressed to remove key constraints and achieve parity with peer locations?

 Economic strategy requires setting priorities and moving beyond long lists of separate recommendations.

How Should States Compete for Investment?

Tactical (Zero Sum Competition)

Strategic (Positive Sum Competition)

- Focus on attracting new investments
- Compete for every plant
- Offer generalized tax breaks
- Provide subsidies to lower / offset business costs
- Every city and sub-region for itself
- Government drives investment attraction

- Also support greater local investment by existing companies
- Reinforce areas of specialization and emerging cluster strength
- Provide state support for training, infrastructure, and institutions with enduring benefits
- Improve the efficiency of doing business
- Harness efficiencies and coordination across jurisdictions, especially with neighbors
- Government and the private sector collaborate to build cluster strength

Harnessing the New Process of Economic Development

Competitiveness is the result of both **top-down** and **bottom-up processes** in which many companies and institutions take responsibility

Old Model

 Government drives economic development through policy decisions and incentives

New Model

 Economic development is a collaborative process involving government at multiple levels, companies, teaching and research institutions, and private sector organizations

Example: Organizing for Economic Development

Effective economic policy also requires coordination within government

Summary

- The goal of economic strategy is to enhance **productivity**. This is the only way to create jobs, high income, and wealth in the long run
- Improving productivity and innovation must be the guiding principles for every state policy choice
- Improving productivity does not require new public resources, but using existing resources better
- Improving productivity demands that governors mobilize the private sector, not rely on government alone
- Economic strategy is non-partisan and about getting results

Next Steps

- 1. Reach out to your team
- 2. Reach out to the business community
- 3. Take advantage of Harvard Business School data and tools to support this effort. Go to www.isc.hbs.edu.

The prosperity of the **U.S. economy** will depend more on the success of states in improving competitiveness than what happens in Washington
